CARPET AREA

PRATHAMA

Introduction

Many technical terms are used to describe the area of your apartment. In this booklet, we have attempted to clarify the significance of each of these commonly used terms. The idea is to provide clarity to the prospective buyers about the size of the areas and facilities proposed for the project.

Definitions of Area

Area of an apartment is measured in square metres, indicated as sq m or square metres. 1 sq m means 1 m length by 1 m width. Earlier area was measured in sq ft or square feet. 1 sq ft means 1' length by 1' width. Area of 1 sq m = 10.764 sq ft.

Carpet Area

Carpet Area means the net usable floor area of an apartment, excluding the area covered by the external walls, areas under services shafts, exclusive balcony or verandah area and exclusive open terrace area, but includes the area covered by the internal partition walls of the apartment.

Built-up Area

Built-up Area = Carpet Area of Apartment + Carpet Area of Balcony + Area of Walls as applicable. Built-up Area of your apartment is the total of Carpet Area and the application area of walls added together along with any balcony area. Total Built-up Area includes Total Carpet Area (area of all rooms and ancillary spaces), Carpet Area of Balcony, 100% area of the external walls which are not shared, 50% area of the walls shared by your apartment and the next apartment, 50% area of walls shared by your apartment and the common facilities like lifts, lobbies, stairs, corridors and so on.

Standard Built-up Area

Standard Built-up Area = Built-up Area + Proportionate share of Built-up Area of common facilities. Standard Built-up Area is the Built-up Area of your apartment plus the proportionate share of the common areas. When there are several apartments on a floor, common facilities like lifts, stairs, lobby and so on are required for circulation, access and enjoyment. The Built-up Area of these common facilities is calculated separately and is added to the Built-up Area of each apartment in proportion to its size. Common facilities will also include areas for electrical rooms, pump rooms, gate houses, guard rooms, lobbies, common toilets, common amenities, covered fire refuge area, common access spaces, common store, maintenance office and related spaces etc which are provided for the common benefit of all users.

CLUB DE VILLE

Enjoy extensive leisure and recreational activities for an enhanced living experience at Club De Ville - The Residents' Club. It offers a variety of facilities such as Infinity Pool, Kids' Pool, Multipurpose Hall, Gymnasium, Indoor Games Room, Kids' Play Area, AV Room, Yoga & Meditation Deck and Pool Deck.

ARCHITECT'S NOTE

The Urvisha complex is designed around the natural green zone, which acts as a unifying feature for the entire residential community. It functions as the lungs for the apartment blocks, as a common space for social gatherings and as a space for interacting intimately with nature.

Each apartment within the complex has a direct visual connection to this central garden. Along the periphery of this green space, the building blocks are set back at intervals, not only allowing for interesting visual dynamics but also creating more intimate secondary cores of natural greenery, as extensions of the central green within the apartment zone.

The low-height club building at the edge of the greens, with the infinity-edge pool overlooking the garden and community spaces on the lower floors, acts as a focal point for the complex.

Semi-private, double-height community spaces are distributed throughout the complex at multiple levels, with easy access from all apartments, having their own internal greenery and spaces for social interaction, with natural light and ventilation, yet sheltered from direct rainfall.

The sky gardens overlook the central garden on one side and peripheral roads on the other, while providing visual relief for the facade of the apartment blocks, whether viewed from the roadside or the central greens. The roof of the apartment blocks on both sides of the complex are connected, creating yet another space for social gatherings in an open yet intimate terrace accessed only by the residents.

The master plan has clearly defined circulation pathways providing access to the apartments and the club.

The building cores are combined to form large apartment blocks to reduce inter-building spaces and maximize the common open space. This avoids the formation of any negative spaces within the complex.

The apartments face the Central Greens on one side and overlook the peripheral access roads on the other side.

The north-south orientation of blocks with minimum exposure of the walls to east and west has been planned to reduce heat gain.

The central open green acts as a heat regulator for the complex reducing heat stress and enhancing natural ventilation.

All apartments have openings on at least two sides. The units are accessed through multiple cores, each with a well-appointed entry lobby on the ground level and 4 apartments per floor.

The common lift and stair lobby on every floor are designed to maximize efficiency without compromising on comfort, with access to natural light and ventilation. Within each apartment, there is minimal corridor space, balconies for all living-dining areas and master bedrooms as well as utility balconies for all kitchens.

There is a provision for cross ventilation in one or more rooms of each apartment. Balconies project

onto the central garden area giving a sense of collective ownership of this core space to each apartment owner.

The overall essence of the design is to give each resident a sense of belonging to a vibrant and eco-friendly community and of pride in their share of ownership of the entire complex, and not just having a feeling of being the owner of an isolated apartment.
